GM Identity Management

Midnight at the OASIS

0010101001010010
00101010010

1. **Opposites attract**

A truce in the standards wars (SAML and WS-FED Integration)

- "I told you who I am already!" – calling an 800 help line

2. **So where are you from?**

Discovering a User's Home Realm (multiple Active Directory forests to choose from)

- Why do you have to give your name AND company signing in at the reception desk?

3. **Do you come here often?**

Cardspace and SAML interoperability (SAML trust of a roaming Cardspace credential or a user authenticated live to a home ADFS)

- A traveler carrying a passport for ID
- A collect phone call

4. **Tell me about yourself**

Web SSO Identity Attribute Sharing (a common claims interface across SAML and WS-*)

- Tivo uses identity plus attribute data to cache other programs you might like

5. **Look how late it is...**

Session Timeout (a common mechanism across standards)

- While banking online, I get an IM, the bank session times out even though I am active in another application's window

6. **See Ya!**

Single Log-Out (a common mechanism across different standards)

- Does the bank know that I've logged out when I close the browser?
